World Acreage and Production of Tobacco 1/

Tobacco is produced to some extent in practically every country of the world. A relatively complete compilation of all published data on acreage and production, by countries, is brought together in this report, compiled almost entirely from the official publications of each country. Since official publications are often two or three years late in reaching the United States, data for the more recent years are largely from the International Institute of Agriculture at Rome, and from reports of United States consuls, commercial attaches, agricultural attaches, and tobacco specialists in foreign countries. As official publications are received, data for the last years are revised accordingly and for this reason the more recent data herein should be considered preliminary.

The year beginning July was decided upon since it corresponds most nearly to the harvesting year for crops of tobacco in both the Northern and Southern Hemispheres. In the Northern Hemisphere the tobacco crop is harvested in the summer and fall while in the Southern Hemisphere the crop is harvested in the spring. For example, in the Northern Hemisphere, data for 1933 are for crops harvested in the summer and fall of 1933; in the Southern Hemisphere, they are for crops harvested in the spring of 1934. For many countries bordering on the Equator data are for the harvest which started late in 1933 and continued into the early months of 1934.

Since the World War a prevalent use has been made of the pre-war average 1909-13. For this reason, estimates as within post-war boundaries have been made for all European countries whose boundaries were altered and where new States were created. These estimates of acreage and production were made by the Bureau of Agricultural Economics in 1924, and are included in this compilation.

During the period of the war, tobacco production decreased in many European countries and in addition, complete data for some countries are not available. Data for the period 1914-19, therefore, are omitted from this compilation except where the official publications state that data are for the post-war boundaries. In this compilation, for European countries whose boundaries were changed, the series from 1909

1/ Compiled by Claudia Thomson, Bureau of Agricultural Economics.

to date are on a post-war basis while the series prior to 1909 are on a pre-war basis. For the countries which did not exist as political entities prior to the war period, there is only the series from 1909 to date.

Some progress has been made in obtaining world production by classes and these data by classes were published in the First Annual Report on Tobacco Statistics (with basic data), Statistical Bulletin 58, issued by the Bureau of Agricultural Economics, and continued in subsequent annual reports. Much is yet to be done on world production by classes and types.

Conversions from reported areas and weights in this compilation were made on the following basis:

1 Cho = 2.4507 acres
1 Dessiatine = 2.6997 acres
1 Donum = .22702 acres
1 English ton = 2240 pounds
1 Hectare = 2.471 acres
1 Hundredweight (English) = 112 pounds
1 Kilogram = 2.2046 pounds
1 Kwan = 8.2673 pounds
1 Manzana = 1.6325 acres
1 Metric quintal = 220.46 pounds
1 Metric ton = 2204.6 pounds
1 Morgen = 2.17 acres
1 Oke = 2.822 pounds
1 Picul = 133 1/3 pounds
1 Pood = 36.1128 pounds
1 Rai = .395 acres
1 Spanish quintal = 101.43 pounds
1 Stremma = .2471 acres
1 Tondeland = 1.363 acres

1914	3,910	3,538	1934	5,190	4,749
1915	3,800	3,457	1935		
1916	3,968	3,563	1936		
1917	4,187	3,718	1937		
1918	4,473	3,871	1938		

1/ Exclusive of China, for which data were not available prior to 1933. Acreage and production for the years 1900 to 1919 include all data available together with estimates of either acreage or production where such data were missing and where an average yield was available. Estimates for years for which no data were reported have been derived by interpolation. India's production, 1900 to 1927 was based on reported acreage and average yield for the period 1927-34. For the earlier years a number of important producing countries are not included, and no data were available for some of the European countries during the World War period. World data are not complete but are based upon what is believed to be the best available sources and include recent revisions in many countries.

Table 2.-Canada: Tobacco acreage, production, and yield per acre, 1870-1937

Year beginning July	Acreage	Production	Yield per acre

1/ Estimates within post-war boundaries, based on official data, were made by the Bureau of Agricultural Economics, United States Department of Agriculture, 1924.

2/ Incomplete; no data for Burgenland.

3/ Data for post-war boundaries from official reports of the country. Tobacco was a minor crop within the post-war boundaries, and no data are available after 1917.

Compiled from Statistisches Jahrbuch des K. K. Ackerbau-Ministeriums; Oesterreichisches Statistisches Handbuch; and Anbauflächen und Ernteergebnisse.

1938			

1/ "There is little evidence regarding trend of production in past years, but it is believed that something near the present high production has been grown for a number of years. **** Practically all tobacco in China is produced by small farmers who grow only small patches. The average tobacco acreage per farm in important producing districts is only about 0.7 of an acre. **** The average yield for all China is approximately 1,500 pounds per acre." Report to the Bureau of Agricultural Economics, May 1936.

Compiled from International Institute of Agriculture.
